Art Unit: 1651

The amendment received 3/9/05 has been entered and claims 1-21 are currently pending in this application. In view of the amendments to the claims are arguments presented, further restriction is required.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a method of detecting oxygen consumption, classified in class 435, subclass 31.
- II. Claims 19-21, drawn to a computer method or software, unclassifiable.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as detecting oxygen consumption without a computer. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Computer software is an independent invention from biological assays which may or may not be performed with a computer.
